deviceTRUST and Liquit together deliver innovative and secure application delivery and access for today's hybrid technology environment.

All applications with contextual security delivered with Liquit and deviceTRUST

In an ideal world organizations always want to deliver every application with the correct settings to any device with the best user experience, all while securing the digital workspace end-to-end. This is the strength that Liquit and deviceTRUST now deliver jointly.

Optimal user experience without disruption

Application access should be seamless for an end-user and security should be invisible, but both should have extreme flexibility for system administrators. Flexibility allows for quick adjustments and new applications to be deployed quickly and securely.

The solution gives full control over your digital workspace with our smart context aware deployments, whilst for an end-user there is a 'single pane of glass' experience for accessing all IT resources.

By combining our strengths, we guarantee:

- Seamless application delivery. Every application. Every platform. Every user.
- Automated patch and release functionality
- Stronger security through context based access
- Enormous cost savings on TCO for application management

Experts in the field

Liquit empowers the modern work-from-anywhere solution, by providing end-users a clean and consistent access to all their applications in one pleasing interface. The expert-backed application management delivers a combination of modern technological flexibility and intuitive user experience that is simply unmatched in today's business landscape.

deviceTRUST brings together all the context and control needed to protect the digital workspace whilst allowing the modern access the users demand.

See it in action

We invite resellers to see the value that Liquit and deviceTRUST bring together. We welcome you to an informal conversation or are happy to provide a demo.

Key benefits:

- Control and manage any device
- Deliver any application and setting seamless to end-users and devices
- Context based access to your workspace, applications and (cloud) desktops
- Secure your digital workspace and physical workspace
- Single Sign On to your workspace and applications
- Connect, deploy, manage and secure all your applications
- Easy enrollment
- Easy patch and release your environment, context based with our setup store and DTAP staging system.
- Save up to 80 percent on your TCO for application management

Case in point:

User receives a new device and logs on to the device which is configured automatically for the end-user. The user navigates to the portal workspace, where the user finds all the applications, he needs to do his job. The unique Smart Icon technology by Liquit decides where the application will be deployed and/or started using the best suitable and available technology. With smart context filters provided by deviceTRUST, the environment is seamlessly secured and the user can start his workday without any interruptions.

Seven simple steps to a secure and modern digital workspace:

1. Configure your virtual or physical workspace. You only need a Liquit agent on the device.
2. Configure your applications and set user rights with Liquit
3. Deploy your applications with Liquit
4. Define your context and related policies with deviceTRUST
5. Give users access to their device
6. Liquit dynamically deploys all the applications to any every user, any location and any device.
7. deviceTRUST automatically secures your digital workspace based on the context of the user.
